HONOR. PROTECT. RESTORE.

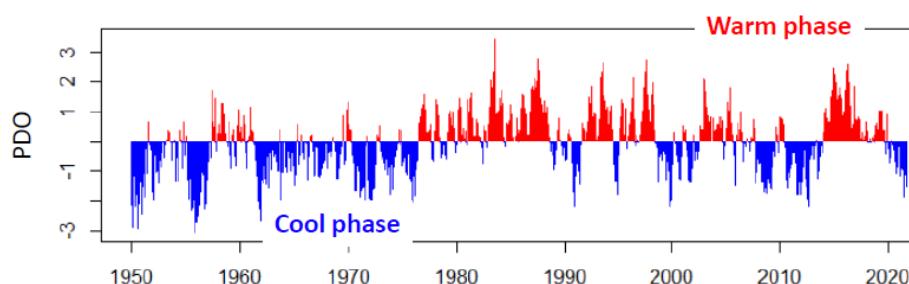

“We have been too content with turning out a nice looking report of the number of fish hatched, reared, and presumably planted; and not sufficiently concerned with what actually happened to the fish afterward” – WM Keil
1935.

Ecological implications of changing hatchery practices for Chinook salmon in the Salish Sea

BENJAMIN W. NELSON ^{1,2,†}, ANDREW O. SHELTON, ³ JOSEPH H. ANDERSON, ⁴
MICHAEL J. FORD, ³ AND ERIC J. WARD ³

**Are current hatchery strategies designed
to engage with
future ocean variation?**

(this will be very Chinook salmon-centric)

Reared to become wild-like: addressing behavioral and cognitive deficits in cultured aquatic animals destined for stocking into natural environments—a critical review

Bull Mar Sci. 97(4):489–538. 2021

**Can reducing the homogenization that
hatchery-reared fish experience under
present practices improve survival?**

Management purpose of hatchery programs

Credit: M. Hess / B. Johnson

- 1.) Harvest Fishery – Fish for harvest
- 2.) Supplementation – Prevent extirpation, rebuild natural production
- 3.) Reintroduction – Restore extirpated populations

Two different management approaches

Supplementation & Reintroduction [Integrated management]

Hatchery

Nature

- Two environments, One population
- Support rebuilding natural production
- Prevent or restore extirpated populations

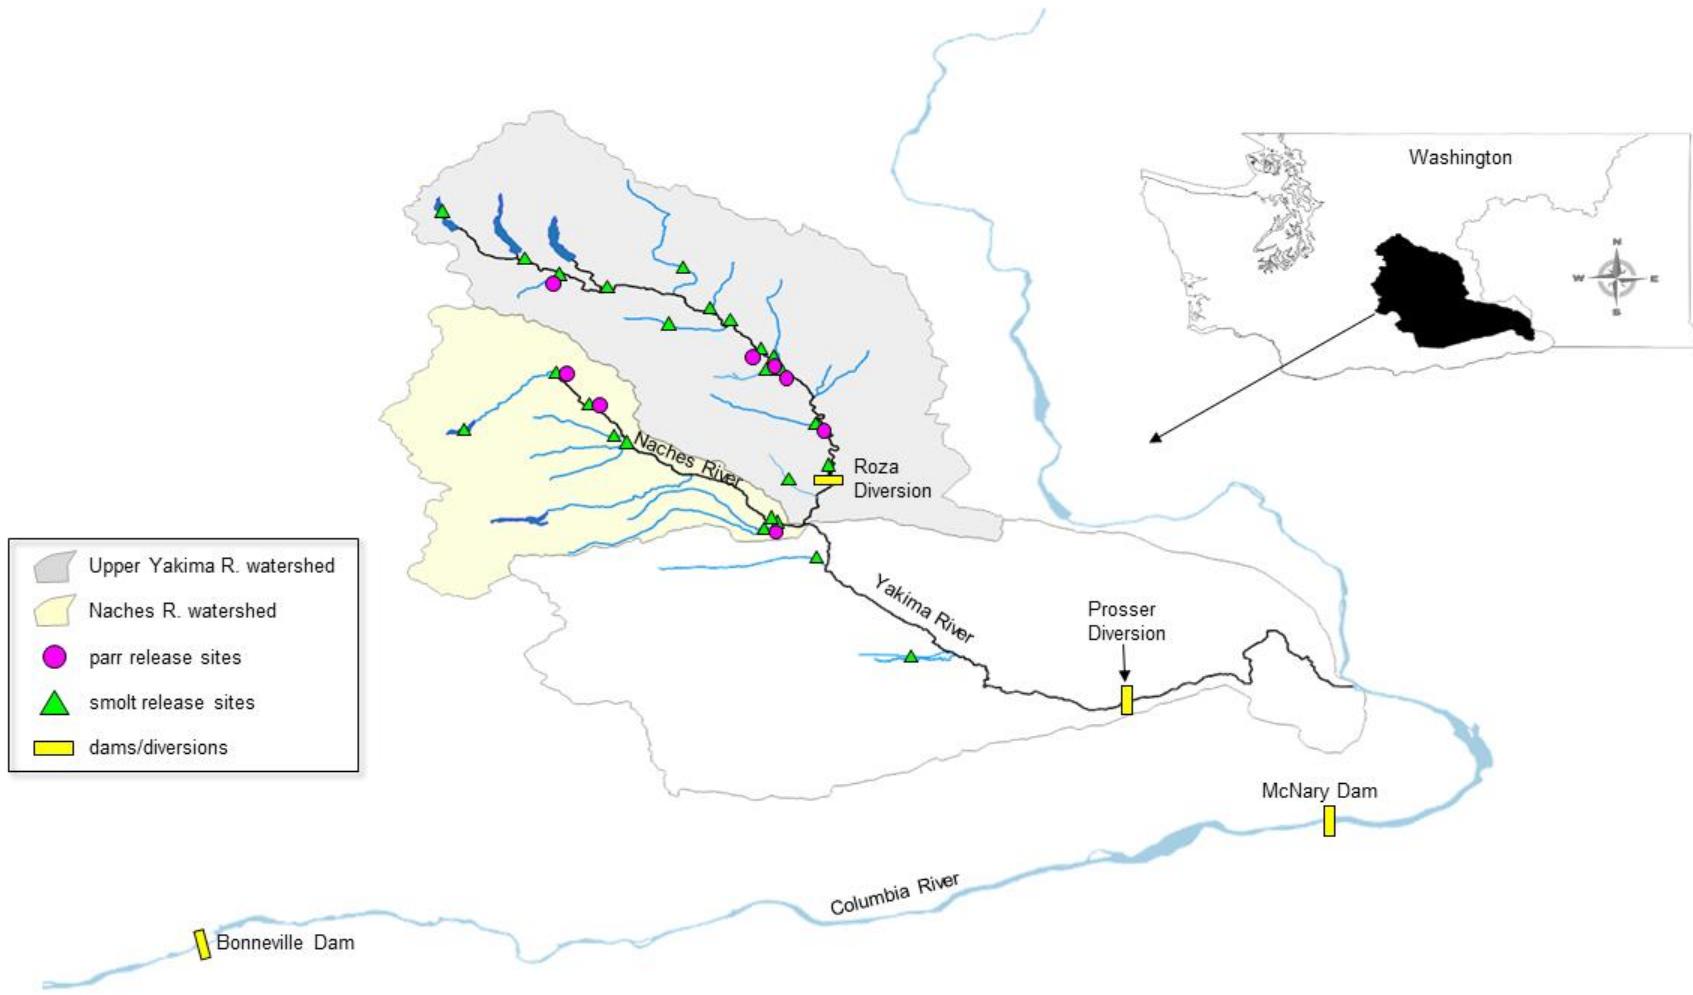

Harvest Fishery [Segregated management]

Hatchery

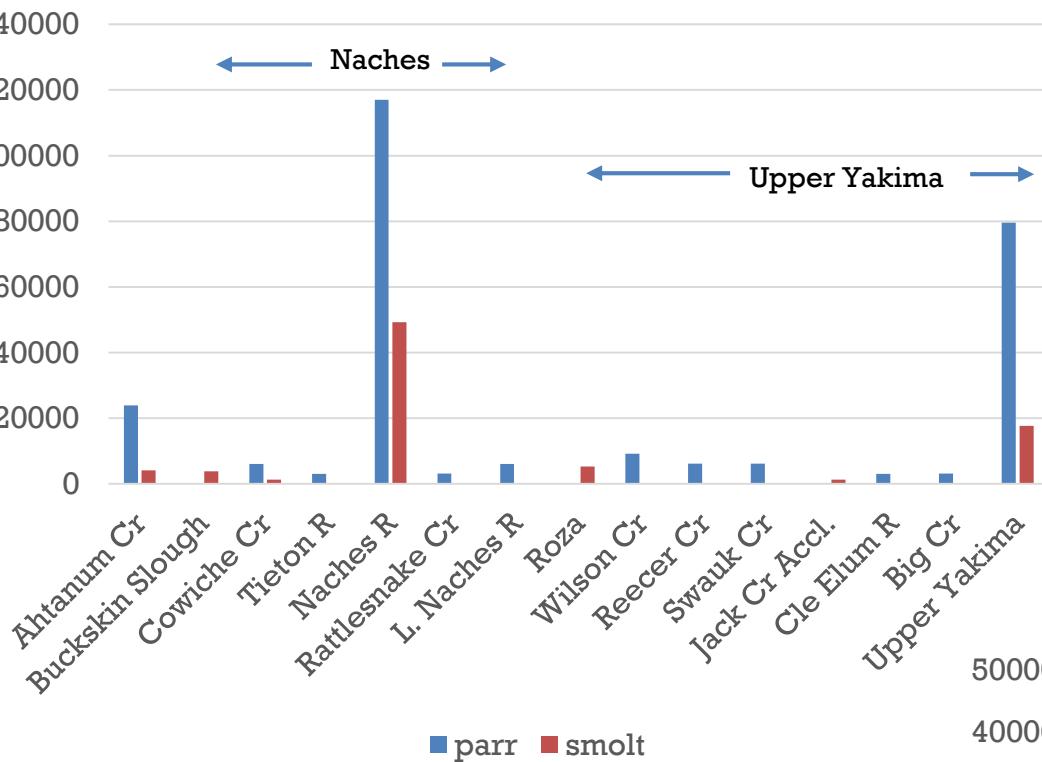

Nature

- Two environments, Two populations
- Promotes harvest of hatchery fish
- Managed to not impede recovery of natural populations

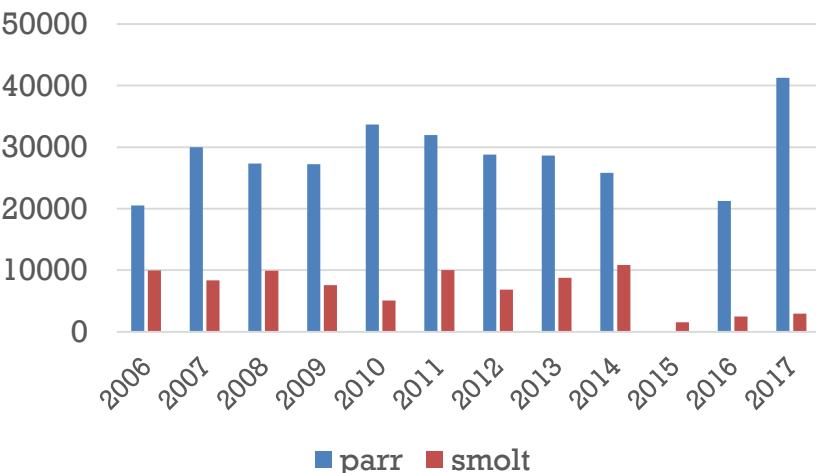

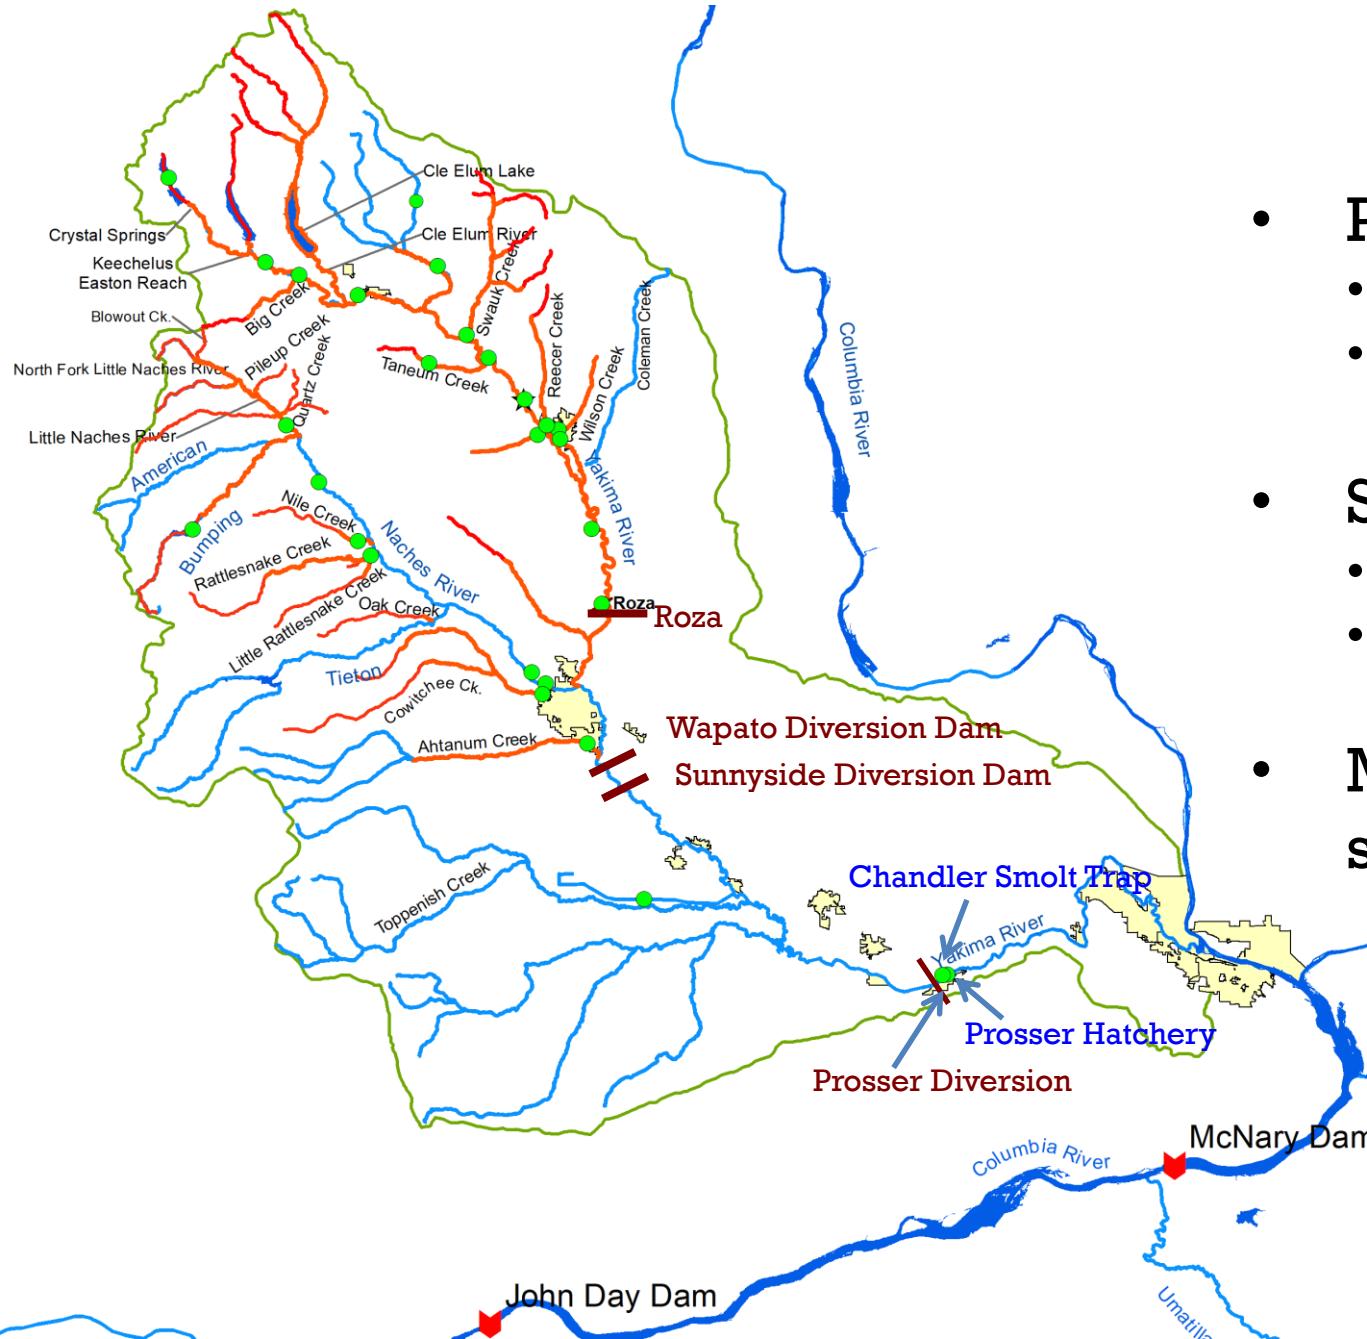

- Targeted Tributaries upstream of Union Gap
- Smolt and Parr Releases
- Brood Years 2006-2017

Methods – PIT-tagged Coho Releases

	Parr	Smolt
Ahtanum	9%	5%
Naches	50%	68%
Upper YR	41%	27%
Total PITs	316,414	84,372

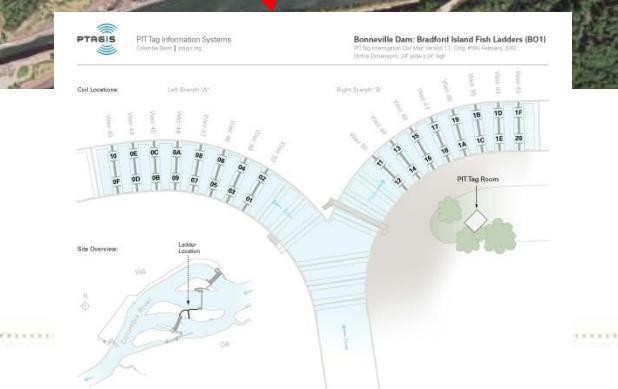

- **Parr**
 - 90mm FL
 - Jun-Aug release
- **Smolts**
 - 113mm FL
 - Mar/Apr release
- **Migrate to sea in same year**

Methods – Downstream PIT Detects

Discussion – Differential Effects

Release to Adult Return

McNary Arrival Times

	Parr	Smolt
Naches	04-Jun	17-May
Upp Yak	25-May	10-May

- Emigration Timing
- Water Management
- Overwinter cond.
- Predation

Discussion

- Learned behavior/‘wildness’ in parr?
- Differential predation effects?
- Differential estuary survival?
- Different ocean distributions?
- Differential tag shedding?

Adaptive Management Considerations

- Smolt and adult releases only in Naches?
- Adults and parr only in Upper Yakima?
- CESRF Spring Chinook – fall release?
- Other ideas?

Summary / ???

- Times are changing; not as simple as setting target release number and fish size
- Reducing homogenization of hatchery releases may produce survival and diversity benefits
- Applications to other species and programs??
