

An Overview of the Klickitat Watershed Enhancement Project

Will Conley, Watershed Restoration Specialist
Yakama Nation Fisheries Program

Klickitat & White Salmon Rivers
Fisheries & Watershed Science Conference
February 27th, 2008

Presentation Outline

- Background, Goals, and Priorities
- Assessment Project Example
- Enhancement and Restoration Project Examples
- Partners and Examples of Cooperative Projects
- Other KWEF Functions
- Summary

KWEP - Background

The Klickitat Watershed Enhancement Project (KWEP) enhances and restores watershed health in the Klickitat River subbasin.

Project actions target stream reaches and watersheds that support steelhead (*Oncorhynchus mykiss*; ESA- listed as “Threatened”) and/or spring Chinook (*O. tshawytscha*).

KWEP is:

- The principal project addressing salmonid habitat conservation and restoration in the Klickitat subbasin
- Implemented by the Yakama Nation Fisheries Program (YNFP)
- Funded by Bonneville Power Administration and matching grants
- Addresses Yakima-Klickitat Fisheries Project (YKFP) goals
- Addresses Columbia Basin Fish & Wildlife Program habitat goals

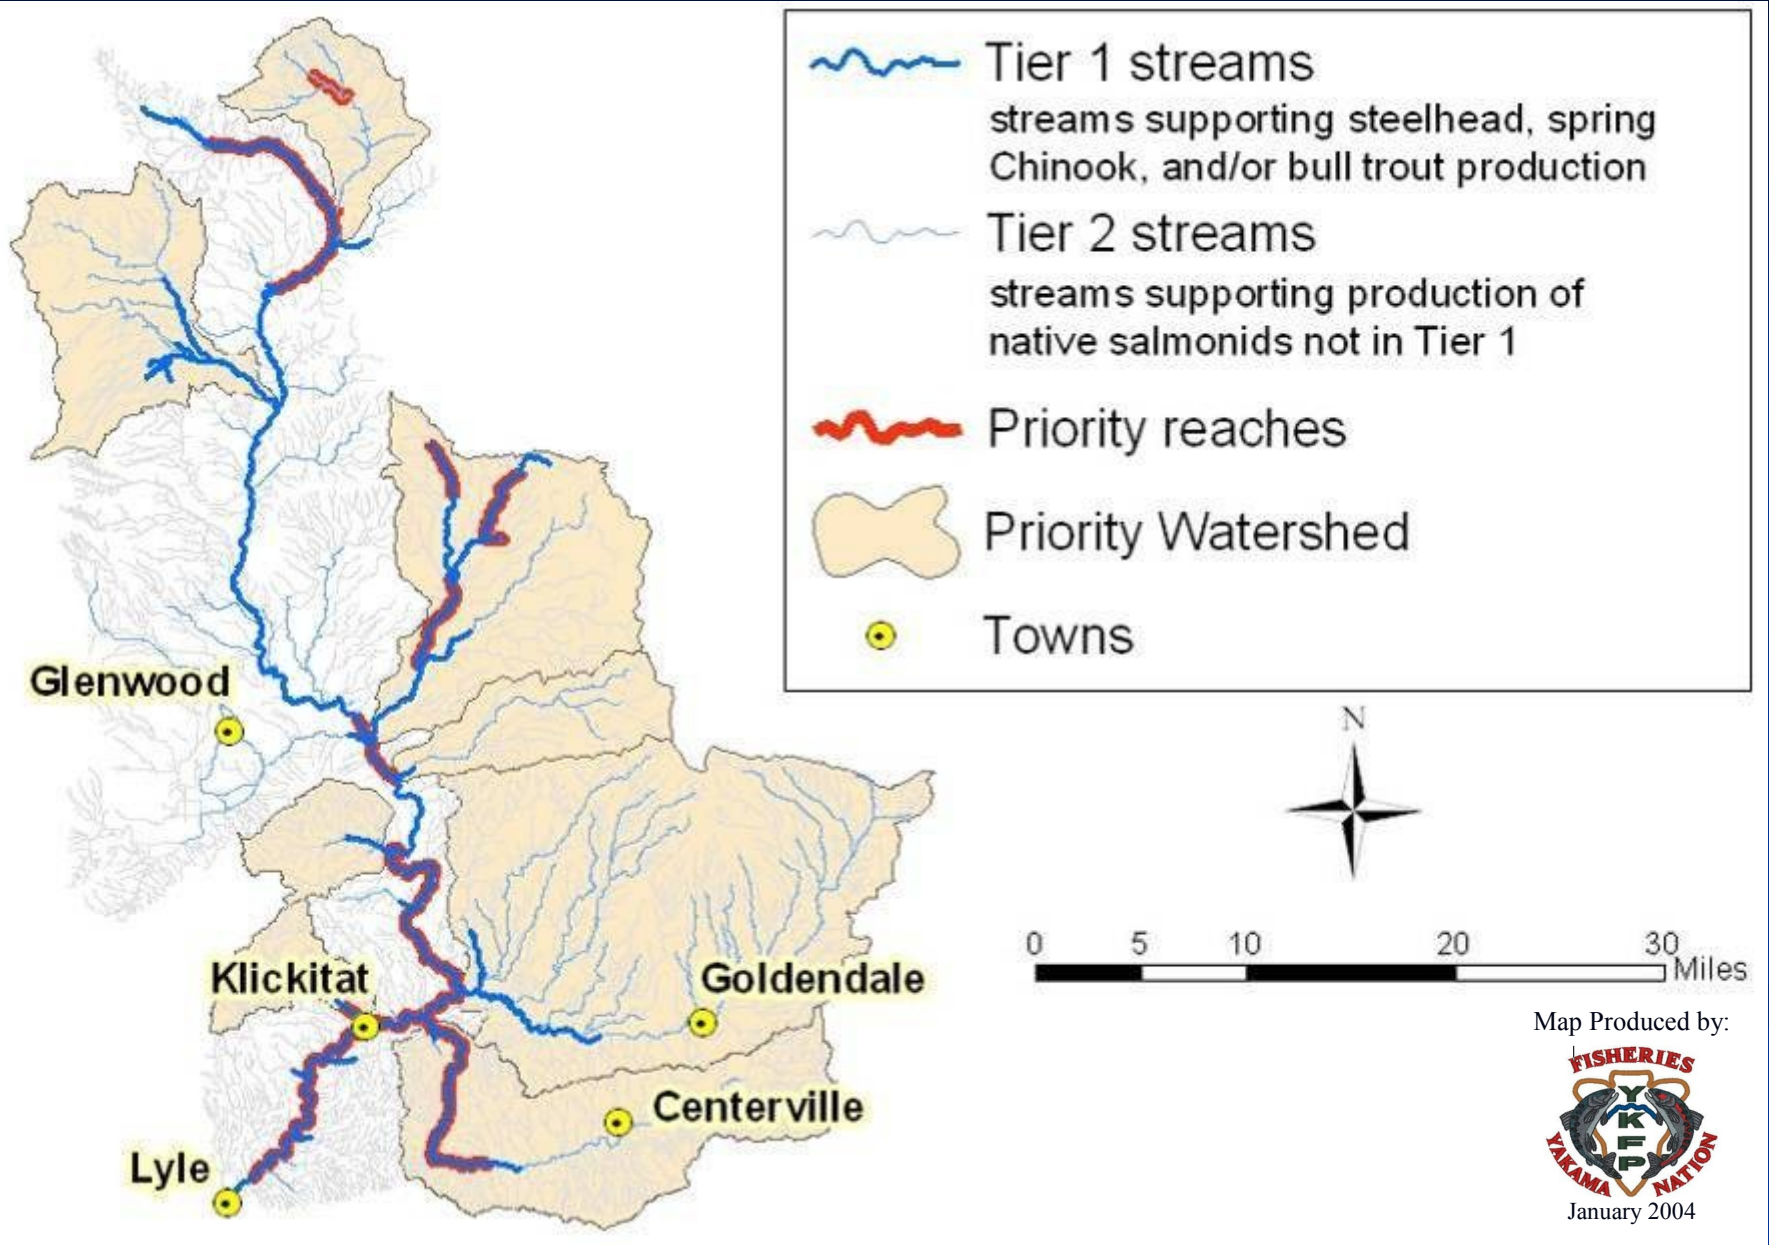

KWEP - Goal

The overall goal of KWEP is to restore watershed health to aid recovery of native salmonid stocks in the Klickitat subbasin.

Three-pronged approach:

- Assess watershed and habitat conditions to prioritize sites for restoration activities.
- Protect, restore, and enhance priority watersheds and reaches
- Monitor to assess watershed conditions and effectiveness of restoration activities.

KWEP – Geographic Priorities

YKFP Project Sites

(mostly KWEP)

Map Produced by:

January 2004

White Creek Roads Project

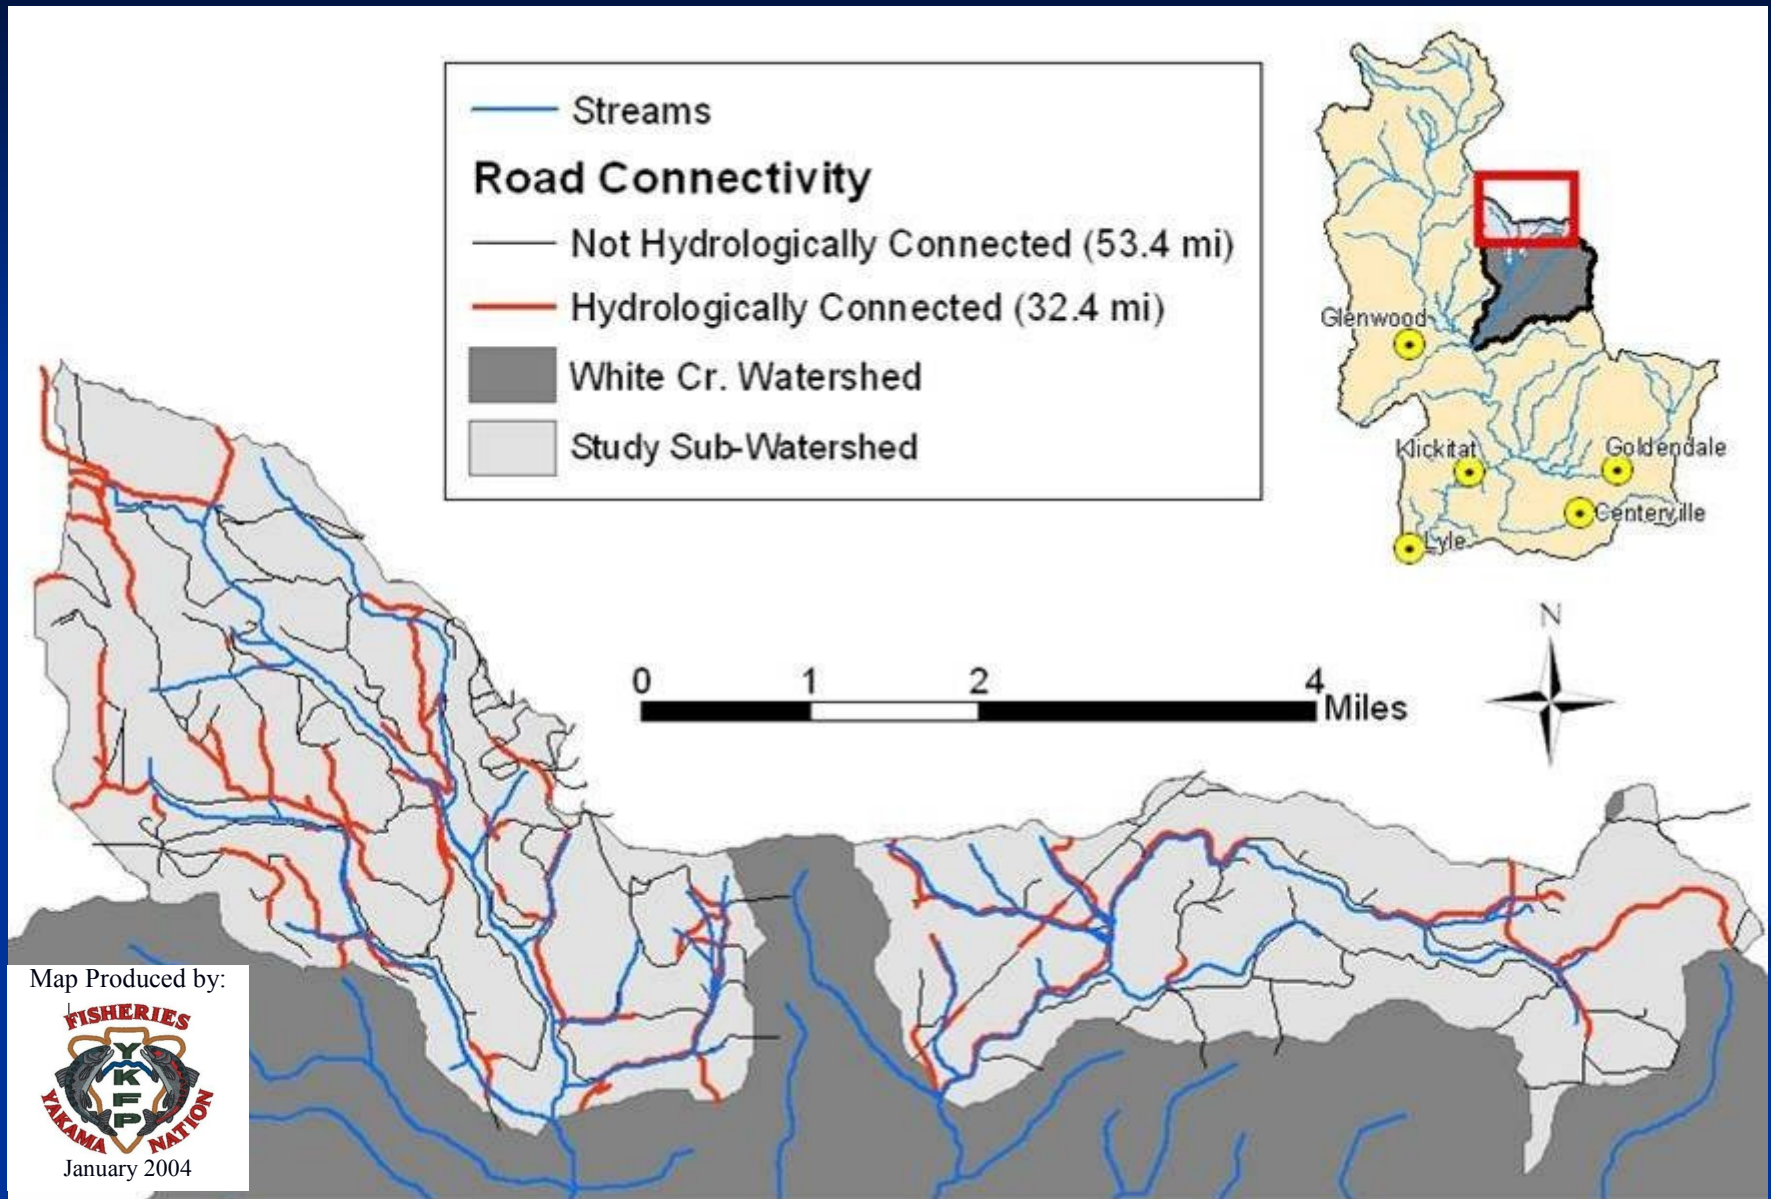

Phase 1 - Assessment

- GIS analysis to prioritize subwatersheds for field inventory
- **field inventory** of 70 miles of road in two priority subwatersheds
- **Hydrologic modeling** of existing and unroaded conditions
 - 13% average increase (5.5% - 31.8%) in discharge for a 2.5-year storm
 - 6.0% average increase (0.6% - 16.0%) in discharge for a 100-year storm

Phase 2 - Assessment

- **Field inventory** of additional 44.4 miles of road
- **Assessment and prioritization** of individual road segments
- **Sensitivity analysis** of the GIS method developed for pre-screening road segments for treatment
- Development of treatment **prescriptions**

White Creek Roads Project: Phase 1 Priorities

White Creek Roads Project: Treatment

- First phase of drainage treatments was completed on the top ten priority groups in November 2005
- 94 waterbars constructed along 7.81 miles of road
- 8 ineffective tank traps enhanced to eliminate vehicular access to another 2.77 miles of road

Surveyors Creek Fish Passage Enhancement

7/6/00

Before:

- Two 6' CMPs
- 1.27' outlet drop
- 0.9' hydraulic drop at inlet
- Serious upstream instability and debris plugging

After:

- Installed 26' span box arch
- native bed material on natural (1.4%) slope
- passes sediment & debris (26" diam x 14' long observed)

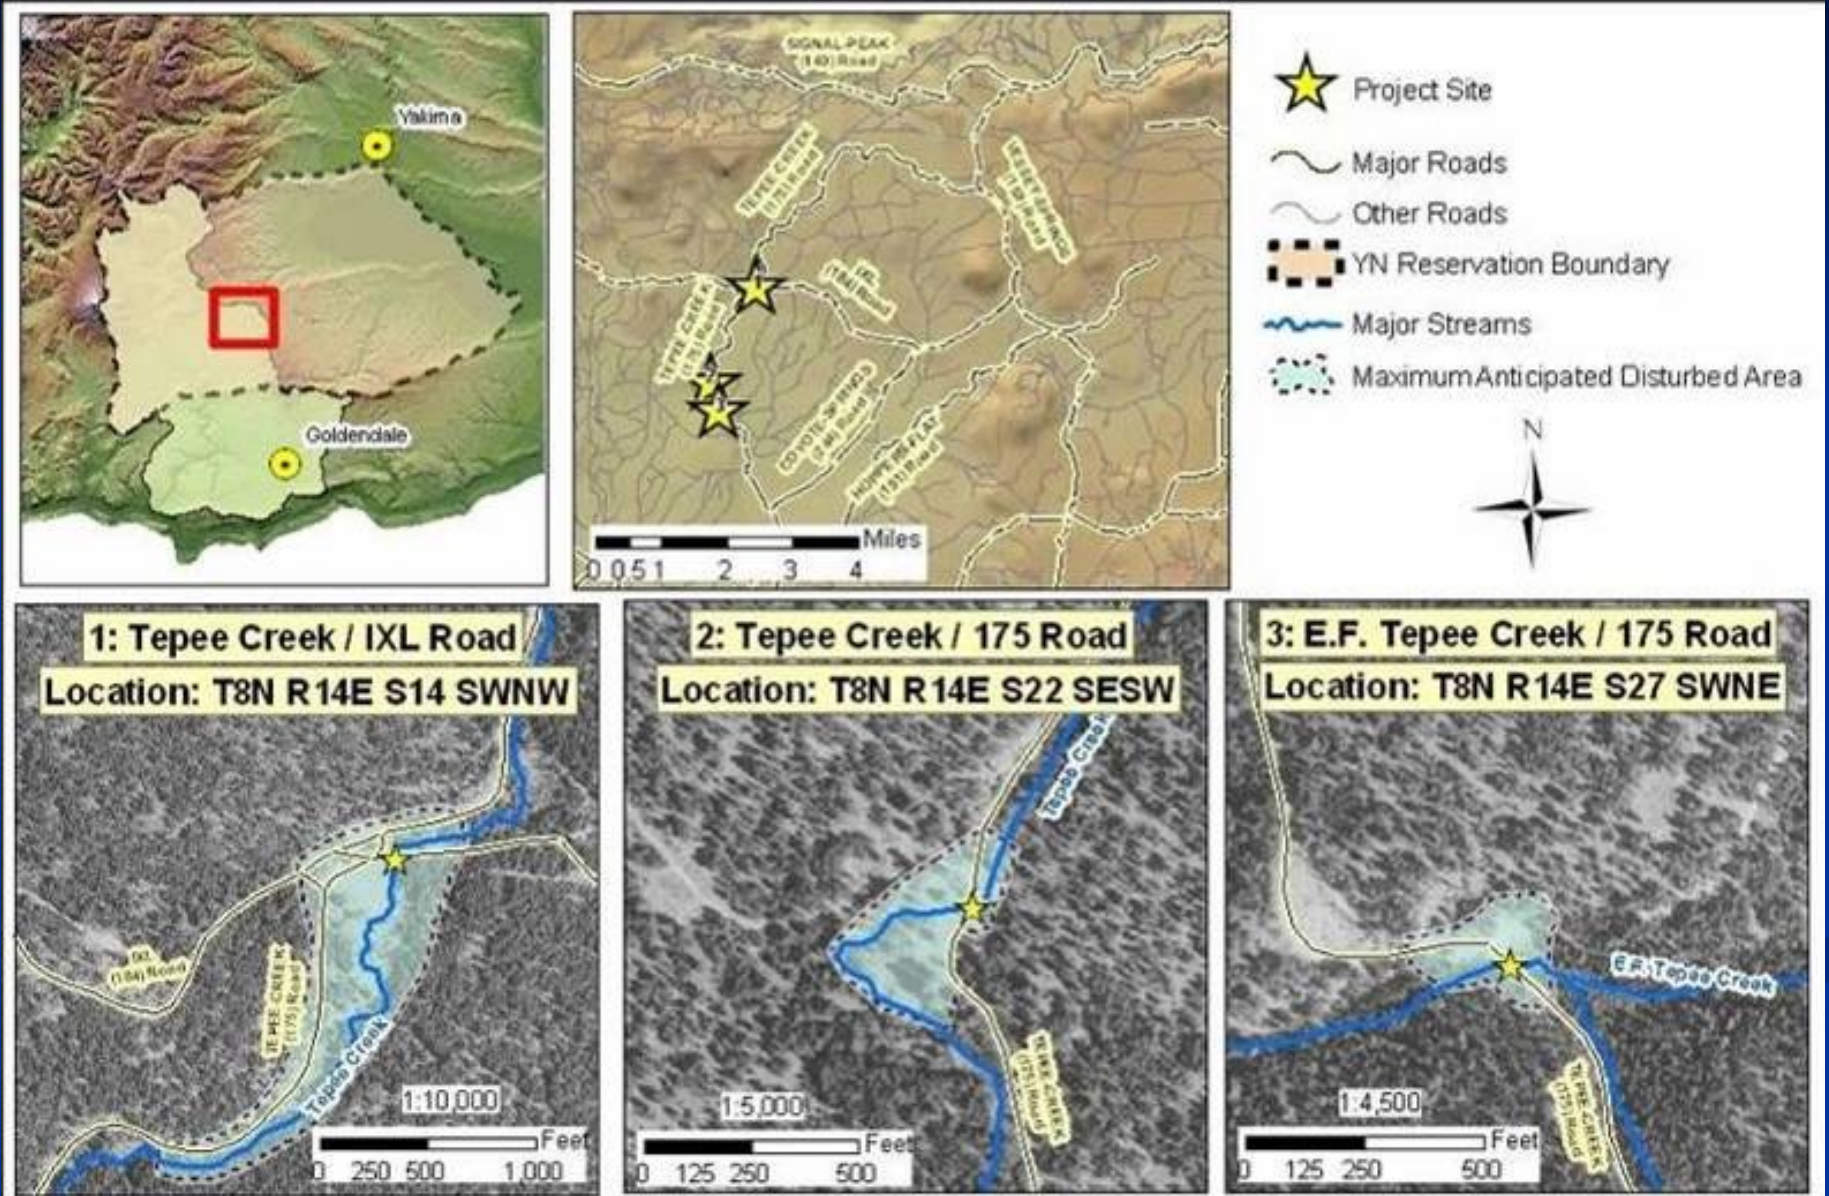

6/2/05

Surveyors Creek Fish Passage Enhancement

- Restored upstream access to 8.7 miles of stream
- Re-aligned creek to add 80' of channel length
- Old culverts left in-situ for floodplain relief
- Old outlet pool left connected to channel
- Resident trout moved into reach within 24-hrs of activation

Tepee Creek Fish Passage Enhancement Project

Tepee Creek Fish Passage Enhancement Project:

Tepee Creek / 175 Road

4/28/04

Before:

- Two 7.8' pipe arches
- 1.6' outlet drop
- Debris plugging history at inlet

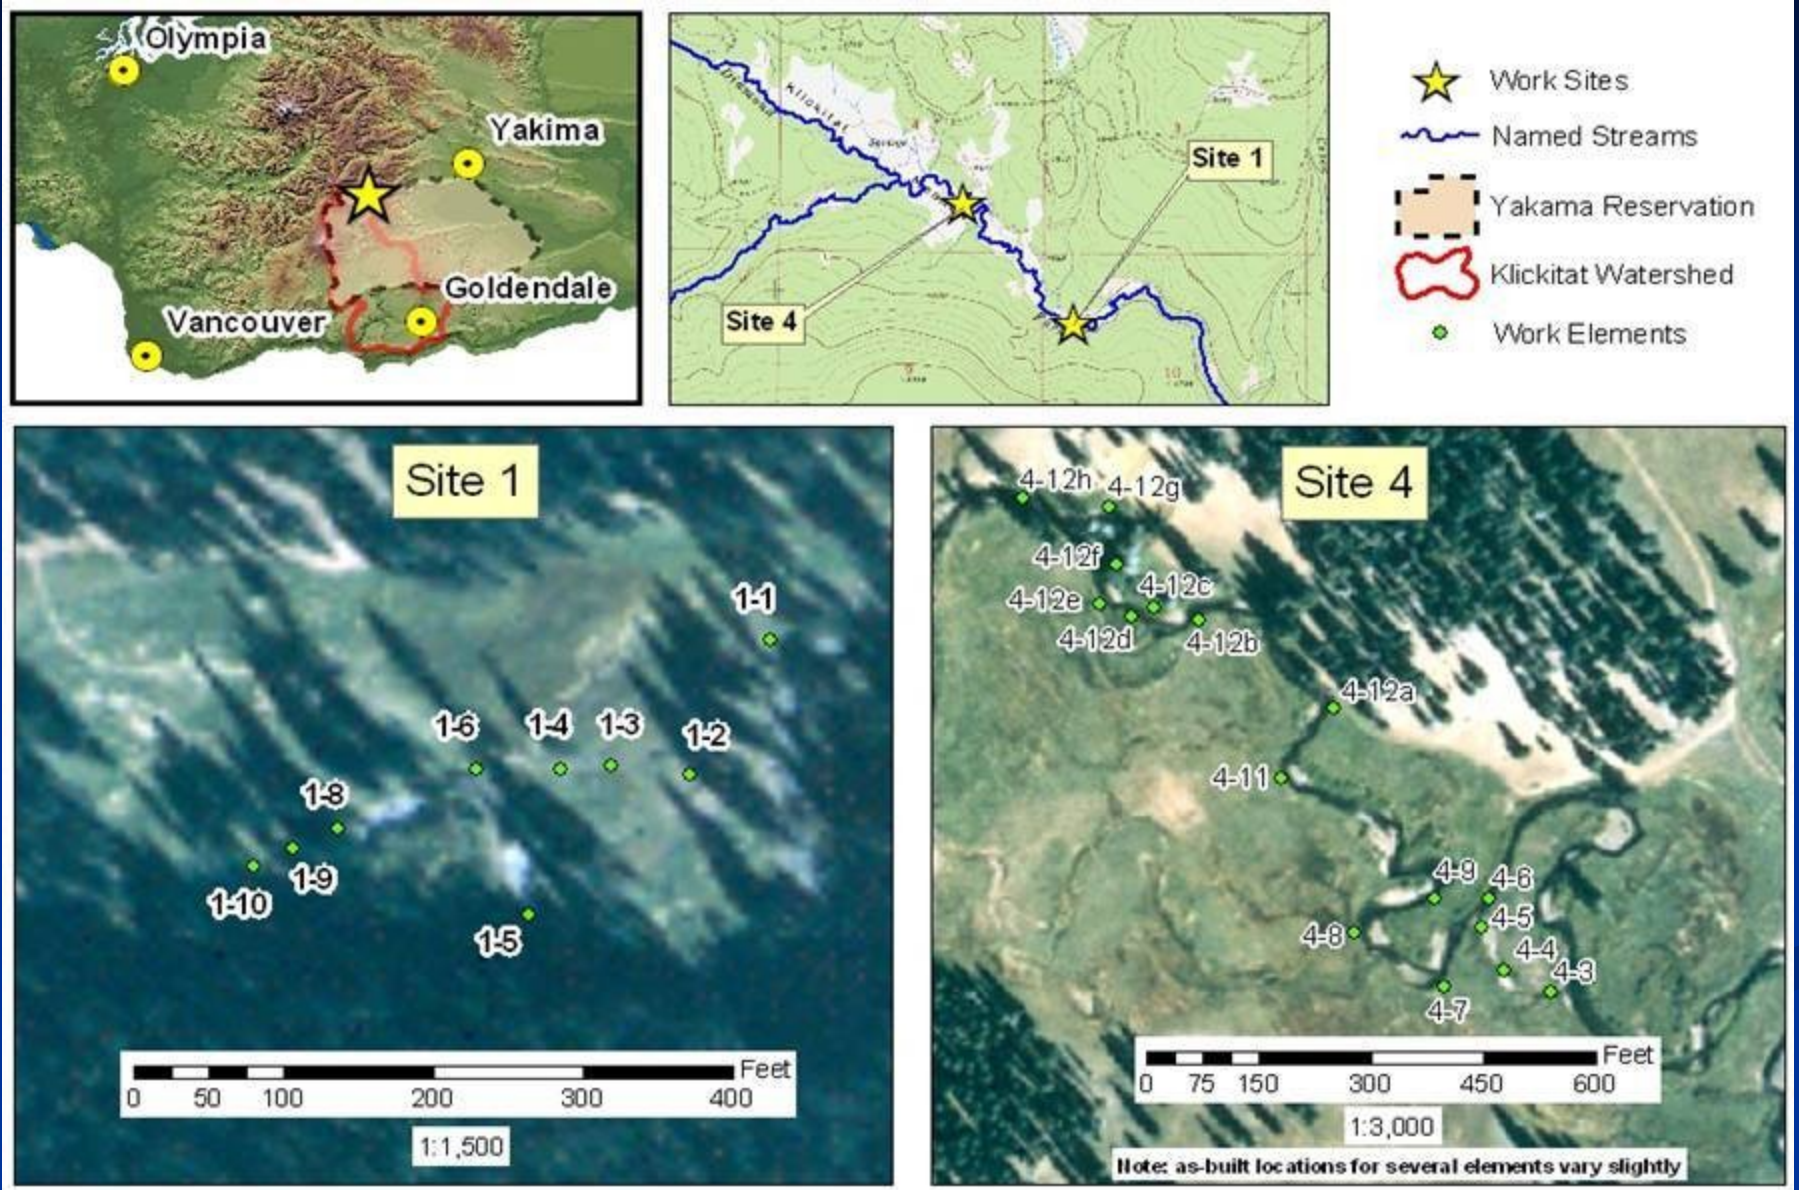

11/19/07

After:

- 40' span bridge
- Native bed material on natural (3%) slope
- Access restored to 2.5 miles of habitat

Klickitat Meadows (Diamond Fork) Restoration

Klickitat Meadows (Diamond Fork) Restoration

2 work sites:

- “Site 1” - 9 elements along roughly 700’ of stream including treatment of a 5’ floodplain headcut
- “Site 4” - 16 elements along roughly 2200’ of stream including reactivation of a 680’ meander
- Closed and rehabilitated 4000’ of illegal jeep trail
- Completed in 2004

Klickitat Meadows (Diamond Fork) Restoration

Site 4 - Element 5

Klickitat Meadows (Diamond Fork) Restoration

Site 4 - Element 12a

7/7/04

Initial (built 7/04) LWD configuration
(before 10/04 modification)

Final as-built (10/04) LWD configuration

10/29/04

7/22/05

1 year post-construction (no Q_{BF})

3 years post-construction (2 Q_{BF} events)

11/6/07

Klickitat River Meadows Restoration

- LWD treatments at 10 sites along 2100' (cumulative)

Site C2

Completed: ~8/12/04

Lower Kessler's Ranch Unit
Constructed 2004
Yakama Nation Fisheries

of Adult Chinook Observed

“N” prefix denotes natural LWD accumulations

“K” prefix denotes jams constructed in late-July and early August 2004

Tepee Creek – IXL Meadows Restoration Project

- 1990' of channel reconstructed to raise bed elevation 3'-4'
- Removed 2 culverts and related fill from an abandoned cross-valley road alignment
- 28 LWD jams constructed
- Several dozen floodplain LWD placements
- 3 ac. of revegetation and weed control
- Started Oct. 2006; completed Aug. 2007

Tepee Creek – IXL Meadows Restoration Project

Tepee Creek – IXL Meadows: Monitoring Wells

Tepee Creek – IXL Meadows: Residual Pool depths

Tepee Creek – IXL Meadows: Steelhead Spawning

Tepee Creek – IXL Meadows:

Results (through first year)

- Groundwater: 3 - 4' increase in summer water table
- High Flow Access: at bankfull or lower flows to four side channels totaling 835 lineal feet
- Pools: increased from 15 to 23 (65%); greater depths
- Wetlands: ~3100 ft² of emergent wetland created
- Riparian Vegetation: Rapid recovery, particularly of salvaged plant materials
- Spawning: Two steelhead redds observed
- Rearing: 2x – 3x increase in juvenile *O. mykiss* abundance
- Macroinvertebrates: Rapid colonization by multiple species of caddisflies and mayflies

Partners: A Key Part of KWEF's Success

- Mid-Columbia Regional Fisheries Enhancement Group
- Columbia Land Trust
- Washington Department of Natural Resources
- Yakama Forest Products
- BIA Forestry and BIA Range
- Washington Department of Fish & Wildlife
- Underwood Conservation District
- Central & Eastern Klickitat County Conservation Districts
- Yakama Nation Water Program
- Washington State Parks & Recreation
- Klickitat County
- private individuals

KWEP Partnerships: Klickitat Mill Project

1/3/02

1/22/04

1/3/02

1/22/04

KWEP Partnerships: Klickitat Mill Project

Before:

- 2600' concrete flume
- Typical winter discharges sheetflow <4" deep
- 4' outfall drop
- Dam at head of flume

4/9/02

After:

- concrete weirs poured to create fishway
- Dam removed
- Outfall drop backwatered
- Access restored to 2.5 miles of habitat

1/29/04

Cooperative Accomplishments

KWEP has partnered on over 10 projects resulting in:

- conservation of over 1050 acres and 4 miles of fish-bearing streams and side channels
- correction of 5 fish passage barriers restoring access to 3.3 miles of habitat
- enhancement of over 3400' of stream
- installation of at least 9,000 plantings along 3,000' of stream
- design and development of relational databases to manage habitat, temperature, and sediment data
- implementation of no-till agricultural practices on several hundred acres of farmland
- two livestock water developments

Active and Upcoming Projects

- replacement of 3 passage barriers that will restore access to over 5 miles of habitat
- treatment of over 2000 feet of road to restore access to 0.5 miles of side channels
- install over 7000 plantings along 5 riparian acres
- enhance over 3500 feet of active channel

Monitoring and Data Management

KWEP works interactively with YKFP projects:

- Data, Management, and Habitat Project (BPA # 198812035)
- Monitoring and Evaluation Project (BPA #199506335)

Data collection & relational database development:

- Habitat data – 78 sites on 39 streams
- Water Temperature – 37 sites on 23 streams
- Sediment – 12 sites on 5 streams

GIS data acquisition and creation

Technical Support

KWEP staff have provided technical support to:

- Private landowners
- Conservation Districts
- Tribal Programs
- Subbasin Planning (Northwest Power Council)
- Recovery Planning (NOAA Fisheries)
- Strategic Planning (WA Salmon Recovery Funding Board)
- Watershed Planning (WA Department of Ecology)

Outreach, Education, and Information Dissemination

- Professional meetings
 - River Restoration Northwest
 - American Water Resources Assoc.
 - American Fisheries Society
- Local elementary schools
 - Dallesport Elementary
 - Klickitat Elementary
 - Goldendale Elementary
- Stakeholder education
 - White Salmon River Festival

KWEP Accomplishments

Since 2000, KWEP has completed over 18 solo projects:

- Fish barriers: 3 replaced restoring access to over 11.5 miles of habitat
- Instream enhancement: over 7400' of stream including construction of 57 LWD jams and structures
- Revegetation: over 15,000 plantings installed along 8,000' of stream
- Livestock fencing: over 10000' of stream
- Wetlands: Creation of more than 3500 square-feet of wetland
- Side Channels: Restoration of high-flow access to over 800 lineal feet
- Road treatments: drainage improvements on 10.5 miles of forest roads
- Morphologic and Habitat Assessment: over 74 miles of stream
- Road Assessment: over 145 miles of road and railroad

Acknowledgements

Ralph Kiona, Watershed Technician

Funding and Materials:

- Bonneville Power Administration
- WA Salmon Recovery Funding Board
- Columbia River Inter-Tribal Fish Commission
- Mid-Columbia Regional Fisheries Enhancement Group
- Bureau of Indian Affairs – Watershed Program
- Yakama Nation
